# WEB PROGRAMMING

## ASSIGNMENT-2

## PROJECT REPORT

### Title

**Smart Hub –** A Centralized Social Connection Platform

### Team Members

1. Kyasaram Vignesh – 1601-24-733-043
2. Gajengi SHivasai – 1601-24-733-037
3. E SriCharan Reddy – 1601-24-733-036

### Problem Statement

In the current digital era, users rely on multiple social media platforms such as Instagram, LinkedIn, and others to represent their identity and connect with people. However, managing multiple profiles across different platforms can be inconvenient and fragmented. Users often face difficulty in sharing all their relevant information in one place, leading to inefficiency and lack of accessibility.

There is a need for a unified platform that allows users to store, manage, and share their personal and professional details in a single, organized interface. The goal is to simplify the process of connecting with others while maintaining a clean and user-friendly experience.

# Abstract

Smart Hub is a web-based application designed to provide a centralized platform for users to manage and share their personal profiles and social media links efficiently. The application enables users to create accounts, log in securely, and update their profile information, including bio, Instagram ID, and LinkedIn profile.

The system is designed with a focus on simplicity, responsiveness, and usability. Users can easily edit their details and view their updated profiles in real time. The project demonstrates the integration of frontend and backend technologies to create a seamless full-stack application.

Smart Hub aims to reduce the complexity of handling multiple platforms by offering a single point of access, thereby improving user convenience and connectivity.

**Objectives**

- To develop a centralized platform for managing user profiles
- To allow users to store and update social media links
- To provide a simple and intuitive user interface
- To implement secure user authentication
- To demonstrate full-stack web development concepts

**Technologies Used**

**Frontend**

- **HTML** – Structure of web pages
- **CSS** – Styling and layout design
- **JavaScript** – Client-side logic and interactivity
- **React.js** – Component-based UI development

**Backend**

- **Node.js** – Runtime environment for server-side logic
- **Express.js** – Framework for building APIs

**Database**

- **MongoDB** – NoSQL database for storing user data

**Other Tools & Libraries**

- **Axios** – For handling HTTP requests
- **Git & GitHub** – Version control and project management

**System Features**

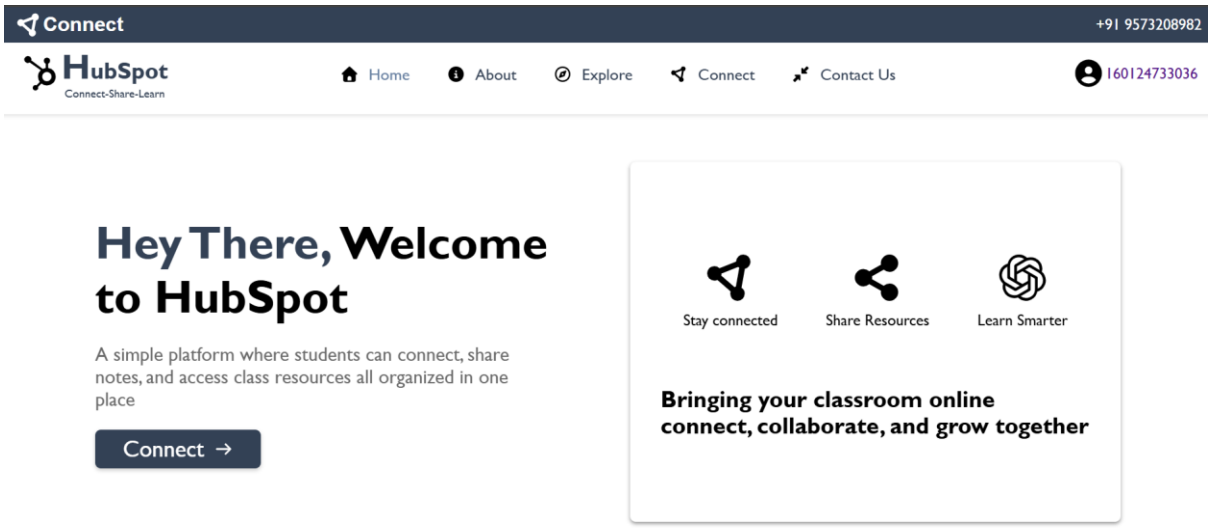
- User Registration and Login
- Profile Creation and Management
- Edit Profile (Bio, Instagram, LinkedIn)
- Dynamic UI Updates
- Secure Data Handling
- Responsive Design

**Working of the System**

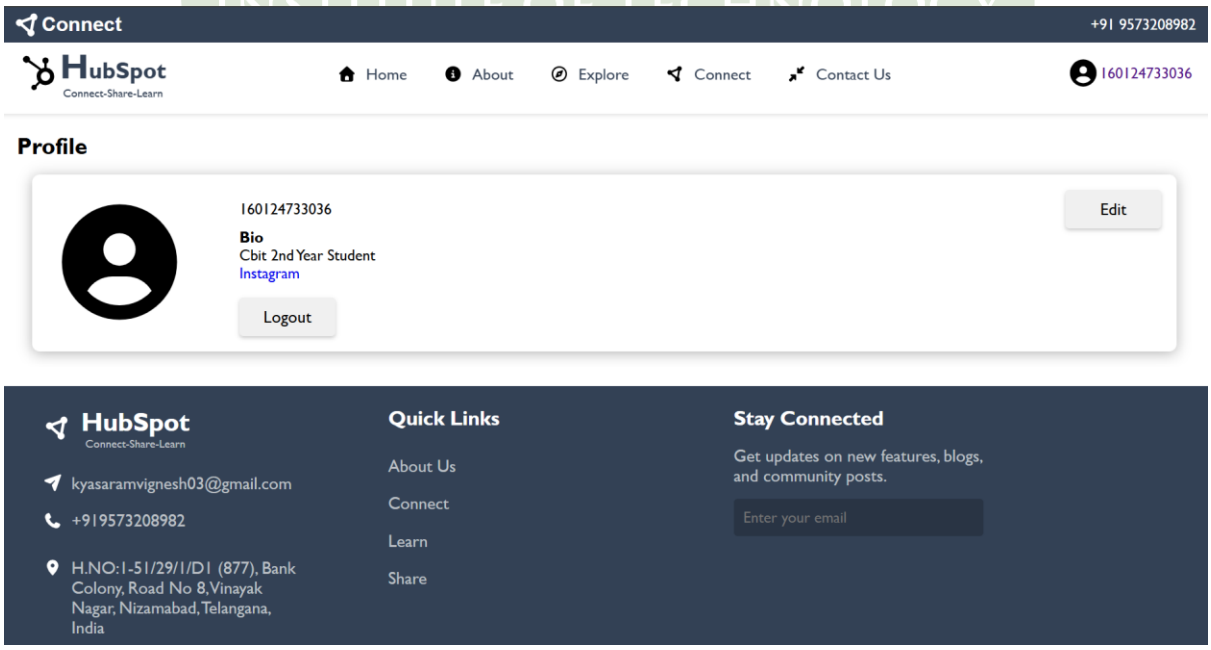
1. The user registers or logs into the application.
2. After successful authentication, the user is redirected to the dashboard.
3. The user can view their profile details such as username and bio.
4. By clicking the "Edit" button, the user can update their Instagram ID, LinkedIn profile, and bio.
5. The updated data is sent to the backend via API requests.
6. The backend processes the request and updates the database.
7. The updated information is reflected instantly on the frontend.

## OUTPUT

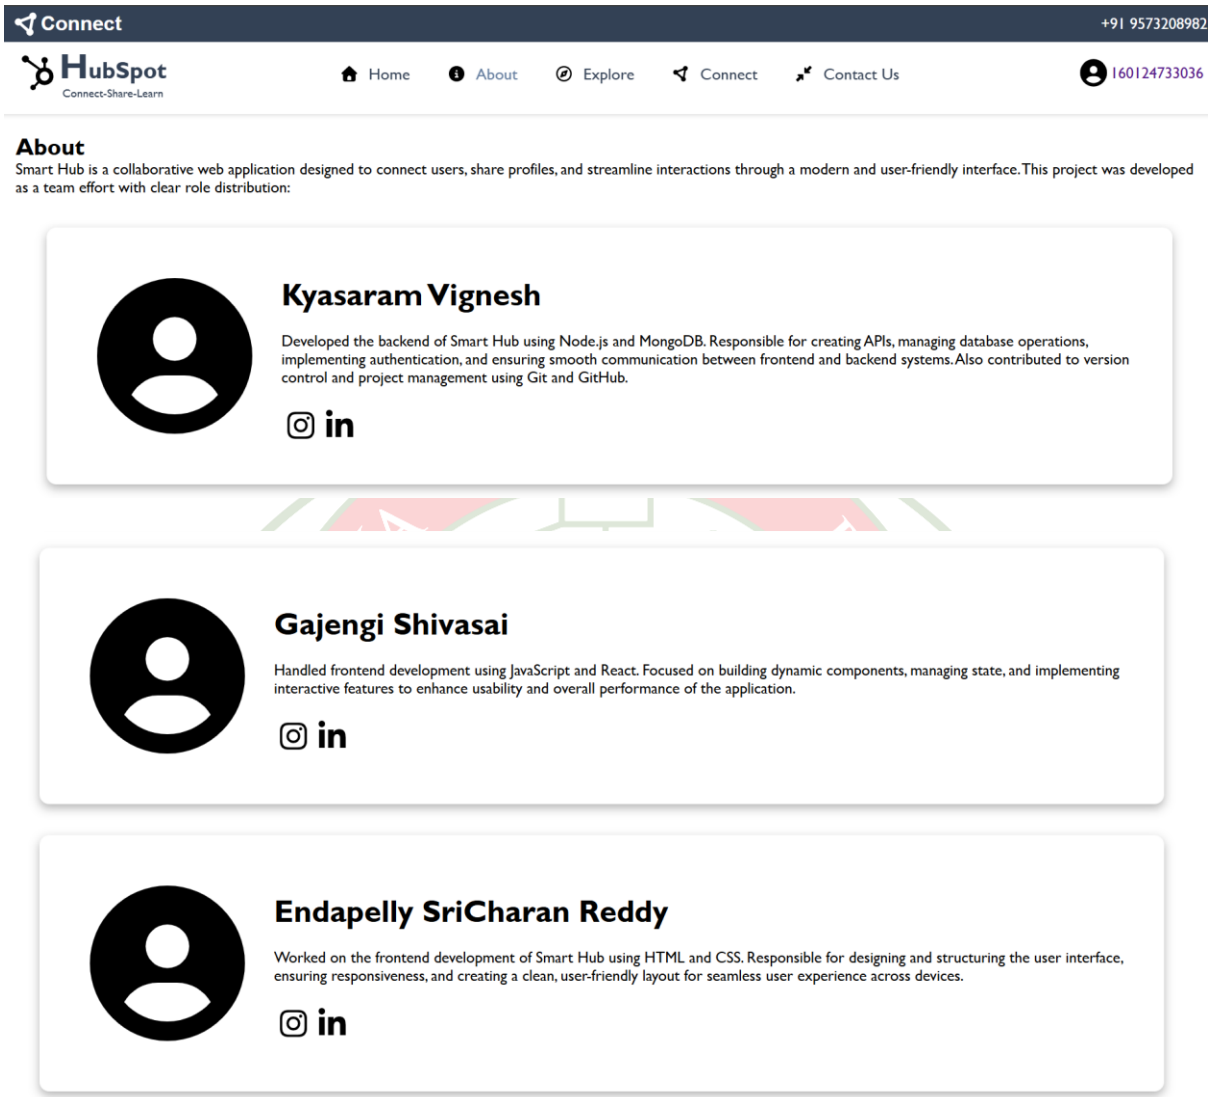
/home – Home Section



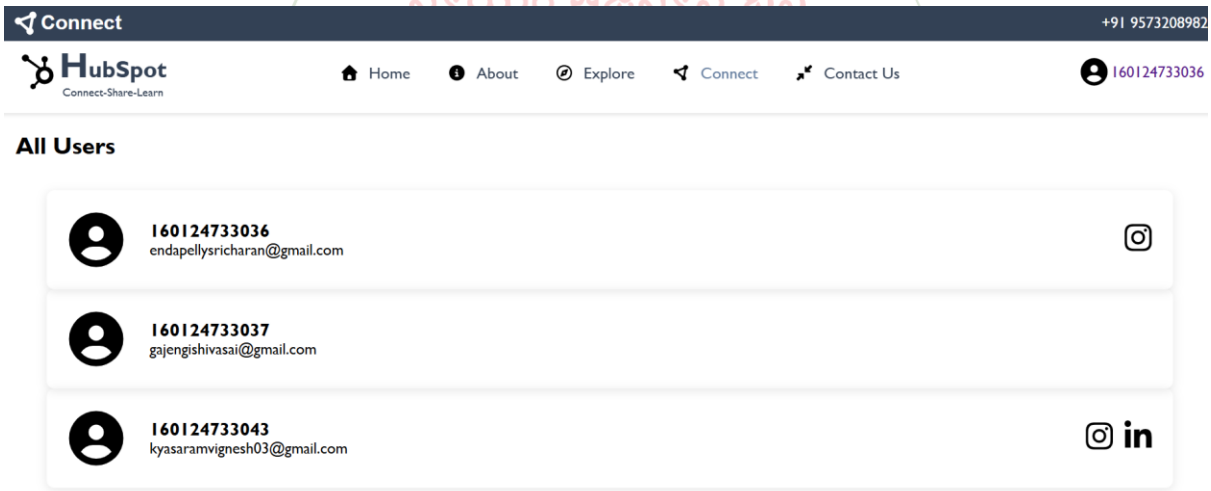
/profile – Profile Section



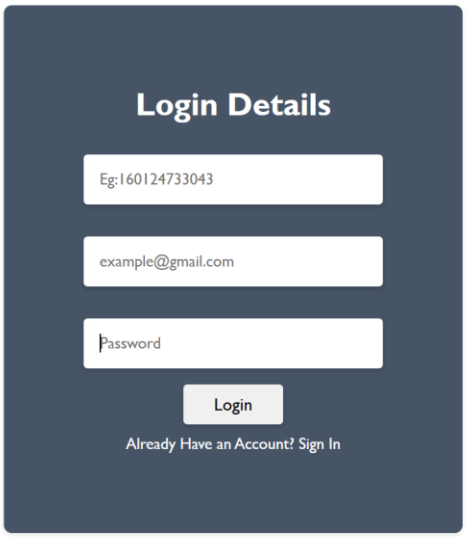
## /about – About Section



## /connect – Connect Section



/login – Login Section



**Conclusion**

The Smart Hub project successfully demonstrates the development of a full-stack web application that simplifies user profile management. By integrating modern technologies like React, Node.js, and MongoDB, the system provides a smooth and efficient user experience.

The project highlights the importance of centralized platforms in reducing complexity and improving accessibility. It serves as a strong foundation for building more advanced social networking applications in the future.
